

Customer Journey Map

Date	27 June 2026
Team ID	XXXXX
Project Name	Voice-Based Concept Understanding Analyser
Maximum Marks	2 Marks

Customer Journey Map

Phase of Journey	Stage 1 (Awareness & Initiation)	Stage 2 (Data Input & Prediction)	Stage 3 (Analysis & Action)
Actions (<i>What does the customer do?</i>)	Opens the Voice-Based Concept Understanding Analyser and selects the concept/topic to practice.	Records or uploads a voice explanation. The application converts speech into text and compares it with the reference content using AI.	Reviews the similarity score, AI feedback, performance dashboard, PDF report, and certificate to improve conceptual understanding.
Touchpoint (<i>What part of the service do they interact with?</i>)	Streamlit Home Page, Topic Selection, Instructions Page.	Voice Recorder, Audio Upload Module, Whisper Speech Recognition, Sentence-BERT Evaluation Engine.	AI Evaluation Dashboard, Statistics Page, Report Generator, Certificate Download Section.
Customer Thought (<i>What is the customer thinking?</i>)	"I hope this platform helps me understand whether I really know the concept."	"Is my explanation being understood correctly? I want an accurate evaluation based on my understanding rather than memorization."	"Now I know my strengths and weak areas. I'll practice again using the feedback to improve my explanation."

Customer Feeling <i>(What is the customer feeling?)</i>	Curious and motivated to evaluate their knowledge before exams, presentations, or interviews.	Slightly nervous while recording, but confident that the AI will provide an unbiased evaluation.	Satisfied and motivated after receiving detailed feedback, reports, and suggestions for improvement.
Process Ownership <i>(Who is in the lead on this?)</i>	Student / Learner	AI System (Whisper + Sentence-BERT + Streamlit Backend)	Student with AI-generated insights and performance reports
Opportunities <i>(How can we Improve this stage?)</i>	Add concept recommendations, learning resources, and personalized topic suggestions.	Support multiple languages, improve speech recognition accuracy, and provide real-time recording quality indicators.	Add learning history, progress tracking, teacher dashboard, interview practice mode, and cloud-based user accounts.
